**DETAILED ACTION** 

Response to Amendment

This action is responsive to an amendment filed on 07/10/2007. Claims 1-20 are pending. 1.

Response to Arguments

2. The arguments filed in the 07/10/2007 Remarks have been fully considered but they are

not persuasive.

Regarding claims 1-6, 8-18 and 20, the Applicant argues on page 6 that "Together, the

combination of Ramey et al. and Kaplan fail to provide any teaching or suggestion of the method

step (or of apparatus) for "receiving a search term from a searcher" or "wherein the contact data

is searched for at least one item of information based upon the search term". Examiner

respectfully disagrees with this argument. In col.5, lines 53-64, Ramey teaches searching

telephone number in database. It clearly means that the searching term is the telephone number

received from caller [i.e., searcher].

Thus the rejection of the claims in view of Ramey and Kaplan remain.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Application/Control Number: 10/673,776 Page 3

Art Unit: 2614

1. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 1-6, 8-18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramey et al. (U.S. 6,298,128) in view of Kaplan (U.S. 6,396,906).

Regarding claims 1 and 13, Ramey teaches a method of contact manipulation and retrieval in an automatic call distribution system (col.1, lines 58-60), comprising the steps of:

receiving a voice message having voice contact information (col.4, lines 59-64, col.5, lines 15-22, 53-56);

converting the voice contact information to contact data in digitized, packetized form (col.4, lines 59-64, col.5, lines 15-22, 53-64);

storing the contact data (col.4, lines 62-64, col.5, lines 15-22);

receiving a search term from a searcher (col.5, lines 53-64);

searching the stored contact data (fig.3; col.5, lines 53-64);

wherein the contact data is searched for at least one item of information using the received search term (col.5, lines 53-64).

However, Ramey does not teach converting the voice contact information using speech. recognition. It is obvious that Ramey suggests the limitation. This is because Ramey teaches converting the voice contact information using combination of codec and DSP (col.4, lines 59-64, col.5, lines 15-22, 53-64). Kaplan teaches converting the voice contact information using speech recognition (col.2, lines 15-22, 41-44, col.3, lines 39-42). Having the cited analogous art at the time the invention was made, it would have been obvious to one of ordinary skill in the art to add speech recognition to Ramey's invention for converting the voice contact information as taught by Kaplan's invention in order to provide users with more accurate digitized data of the actual voice data.

Regarding claims 2, 10 and 14, Ramey teaches that the message is a voice message, and wherein the voice message is inherently packetized to thereby convert contact information in the voice message to contact data (abstract; fig.2, 4; col.4, lines 59-64).

Regarding claims 3, 11 and 15, Ramey teaches that the message is a voice message, and wherein the voice message is converted to digitized [i.e., text] as the contact data (col.4, lines 59-64).

Regarding claims 4, 12 and 16, Ramey teaches that the message is a voice message, and wherein the voice message is packetized, and wherein the packetized voice message is converted to text as the contact data (abstract; fig.2, 4; col.4, lines 59-64, col.7, line 64- col.8, line 15).

Regarding claims 5 and 17, Ramey teaches that the system has at least one agent, and wherein the method further comprises providing at least one plug-in that implements conversion and storing of contact data in the automatic call distribution system (abstract; fig.2, 4; col.1, lines 58-60, col.4, lines 59-64, col.7, line 64- col.8, line 15). (Note; agents are software routines and algorithms)

assigning inherently the at least one plug-in to the agent (abstract; fig.2, 4; col.4, lines 59-64, col.7, line 64- col.8, line 15).

activating the at least one plug-in for the agent when a message having contact information is received at the automatic call distribution system (abstract; fig.2, 4; col.4, lines 59-64, col.7, line 64- col.8, line 15).

Regarding claims 6 and 18, Ramey teaches that the automatic call distribution system has a plurality of agents and a plurality of plug-ins, and wherein the method further comprises determining inherently for a respective agent of the plurality of agents the at least one plug-in, which is assigned to the respective agent (abstract; fig.2, 4; col.4, lines 59-64, col.5, lines 15-22, 53-64, col.7, line 64- col.8, line 15). (Note; agents are software routines and algorithms)

Claim 8 is rejected for the same reasons as discussed above with respect to claim 1. Furthermore, **Ramey** teaches that messages are converted to text stored in a central repository for use in post-processing and search for key word matches (col.4, lines 59-64, col.5, lines 15-22, 53-64).

Claim 9 is rejected for the same reasons as discussed above with respect to claims 1, 5 and 6. Furthermore, **Ramey** teaches a plurality of format conversion plug-ins (abstract; fig.2, 4; col.4, lines 59-64, col.7, line 64- col.8, line 15).

Regarding claim 20, Ramey does not specifically teach "the communication system is an automatic call distribution system". Kaplan teaches that the communication system is an automatic call distribution system (fig.1; item 112). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Ramey to incorporate the communication system being an automatic call distribution system as taught by Kaplan. The motivation for the modification is to have doing so in order to connect a caller to one of a plurality of agents in order to meet caller's need.

4. Claims 7 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ramey et al. in view of Kaplan further in view of Holmes, JR. (U.S. Pub. No. 2002/0138296).

Regarding claims 7 and 19, Ramey teaches activating the plug-in for the agent (abstract; fig.2, 4; col.4, lines 59-64, col.7, line 64- col.8, line 15). However, Ramey in view of Kaplan does not specifically teach "the agent logs onto the automatic call distribution system". Holmes teaches that the agent logs onto the automatic call distribution system (page 6, paragraph 0075). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Ramey in view of Kaplan to allow the agent logging onto the automatic call distribution system as taught by Holmes. The motivation for the modification is to provide status of agent.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Md S. Elahee whose telephone number is (571) 272-7536. The

examiner can normally be reached on Mon to Fri from 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Fan Tsang can be reached on (571) 272-7547. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
